# Common and Scientific Names of Trees and Shrubs of Mariana, Caroline, and Marshall Islands

Marjorie C. Falanruw

Jean E. Maka

Thomas G. Cole

Craig D. Whitesell

Falanruw, Marjorie C.; Maka, Jean E.; Cole, Thomas G.; Whitesell, Craig D. 1990. **Common and scientific names of trees and shrubs of Mariana, Caroline, and Marshall Islands.** Resour. Bull. PSW-26. Berkeley, CA: Pacific Southwest Research Station, Forest Service, U.S. Department of Agriculture; 91 p.

Building on previous work on compiling plant names in the Western Pacific islands, this bulletin lists some 602 scientific names, and 2913 common names in the variety of languages used in the Caroline, Marshall, and Mariana Islands. These computerized, cross-indexed lists can be updated.

*Retrieval Terms:* species names, trees, shrubs, Caroline Islands, Guam, Kosrae, Mariana Islands, Marshall Islands, Palau, Belau, Pohnpei, Truk, Yap

---

## The Authors:

---

**MARJORIE C. FALANRUW**, a research biologist with the American/Pacific Islands Forestry Research Unit, is stationed in Yap. **JEANE E. MAKA** is a computer programmer/analyst with the Station's Forest Management Research Unit, in Honolulu. **THOMAS G. COLE** is a forester with the research unit in Honolulu. **CRAIG D. WHITESELL**, a research forester, is leader of the Station's American/Pacific Islands Forestry Research Unit, in Honolulu.

---

## Acknowledgments

---

The computerized lists presented here are largely based on published Micronesian plant names and we are grateful to the many authors listed in the reference section, especially Dr. F. R. Fosberg. Names attributed to Fosberg (1946) are further referenced in that report, to original sources and collection numbers of voucher specimens. Alfred Capelle and Jimmy Joseph assisted in identifying Marshallese plants and determining their local names. The original computer entry was done by Janet Morse.

## INTRODUCTION

---

Forestry work in the American/Pacific islands suffers from the lack of a cross-indexed list of scientific and common names of trees and shrubs. The problem is especially acute for those who work throughout this area of numerous languages and dialects. Although English is becoming the *lingua franca* of the area, many plants lack common English names. Instead, the multiplicity of common names often unique to the many languages, dialects, islands, and even parts of islands in the area makes communication difficult.

We have sought to bring together results of past efforts to collect and compile common plant names into a computerized, cross-indexed source that can be updated from time to time. In doing this, we have built on the work of Edwin H. Bryan Jr., the late curator emeritus of the Pacific Scientific Information Center of the Bishop Museum, F. Raymond Fosberg, curator emeritus of the Botany Department of the Smithsonian Institution, and other authors listed in the References. This initial compilation is intended as a working list for field workers, and is designed to be improved and expanded as a result of ongoing and future work.

Botanical studies and the collection of common plant names in Micronesia have been carried on by numerous workers over many years, often in conjunction with other efforts. None of the field workers whose lists are included in this present compilation has had the aid of an official orthography for the language whose plant names were collected. Most of these workers did not themselves speak the local language or have time to adjust their ears or spellings to the language of a particular island. Therefore, published names and spellings are not without problems. The names included here, except those for the Marshall Islands, are largely taken as listed in earlier publications. A reference is given for each entry, so that the source of the name may be traced. Names from the Marshall Islands were reviewed and spellings were modified according to consensus by a group of native speakers of Marshallese.

---

## CONTENTS AND SCOPE

---

This bulletin lists some 602 scientific names, and 2913 common names in a variety of languages used in the Caroline, Marshall and Mariana Islands in the Western Pacific Ocean.

The names listed are those of trees and shrubs (in the broad sense) for which common names are available in the literature. Politically, the area covered includes the Federated States of Micronesia (comprising the States of Pohnpei, Kosrae, Truk, and Yap), Republic of Palau, Republic of the Marshall Islands, Territory of Guam, and the Common-

wealth of the Northern Mariana Islands.

Rules for indicating species symbols are those established by the U.S. Department of Agriculture's Soil Conservation Service (SCS) for the National List of Scientific Plant Names. Symbols in this list have been compared with the National List of Scientific Plant Names (SCS 1982); conflicting or duplicate entries have been adjusted by the use of tie breakers. Scientific names of Dicotyledonae follow those given in Fosberg and others (1979); palms follow those given in Moore and Fosberg (1956), and Gymnosperms follow those given in Fosberg and others (1982).

---

## USE OF LISTS

---

The computerized data base compiled in accordance with the preceding rules will be maintained for future updating by the Forest Service, Pacific Southwest Forest and Range Experiment Station at 1151 Punchbowl Street, Room 323, Honolulu, HI 96813. Information presented here is organized as follows:

Plant names are listed by the major language groups and areas in which they would be used in the field. These are given below.

1. Mariana islands (Commonwealth of the Northern Mariana Islands and the Territory of Guam)
2. Republic of Palau
3. Republic of the Marshall Islands
4. State of Kosrae, Federated States of Micronesia
5. State of Pohnpei, Federated States of Micronesia
6. State of Truk, Federated States of Micronesia
7. State of Yap, Federated States of Micronesia

For each of these areas, two major lists are given: (1) an alphabetical list by common plant names; (2) an alphabetical list by scientific names. In addition, a separate list of common synonyms has been included for all islands, and in *table 1* (all tables are in the *Appendix*), a list of language codes.

The common names list is in this format (*table 2*):

1. Species symbol
2. Common name
3. Scientific name, including variety and subspecies
4. Author
5. Language code
6. Source of common name

The scientific names list is in this format (table 3):

1. Species symbol
2. Scientific name, including variety and subspecies
3. Author
4. Common name
5. Language code
6. Source of common name

The synonyms list is in this format (table 4):

1. Synonym name, including variety and subspecies
2. Synonym author
3. Correct scientific name, including variety and subspecies

Readers are invited to send any corrections, additions, or requests to the authors at the Pacific Southwest Forest and Range Experiment Station, 1151 Punchbowl St., Rm. 323, Honolulu, HI 96813. The computerized data base contains further information on some plants that is not printed in the above lists. We would appreciate any additions to include as much as possible of the following information:

1. Genus and species name
2. Variety, subspecies, hybrid
3. Author
4. Family name
5. Habit
6. Use or importance (i.e. food, ornamental, medicinal, textile, hardwood, economic crop plant, multi-purpose, poisonous, noxious, or benign)
7. Origin or status (i.e. endemic, native, introduced and naturalized, or in cultivation only)
8. Distribution
9. Relative abundance (i.e. endangered, threatened, candidate for endangered or threatened, rare native, rare introduced, common, or invader)
10. Common name
11. Major island group
12. Specific island
13. Language of common name
14. Source of common name
15. Comments or explanation of how name was obtained

## APPENDIX

---

**The Forest Service, U. S. Department of Agriculture,** is responsible for Federal leadership in forestry. It carries out this role through four main activities:

- Protection and management of resources on 191 million acres of National Forest System lands
- Cooperation with State and local governments, forest industries, and private landowners to help protect and manage non-Federal forest and associated range and watershed lands
- Participation with other agencies in human resource and community assistance programs to improve living conditions in rural areas
- Research on all aspects of forestry, rangeland management, and forest resources utilization.

**The Pacific Southwest Research Station**

- Represents the research branch of the Forest Service in California, Hawaii, American Samoa and the western Pacific.

---

Persons of any race, color, national origin, sex, age, religion, or with any handicapping conditions are welcome to use and enjoy all facilities, programs, and services of the U.S. Department of Agriculture. Discrimination in any form is strictly against agency policy, and should be reported to the Secretary of Agriculture, Washington, DC 20250.
